Preparing the Adolescent for Adulthood: Best Practices to Support Transition in Healthcare & Life

April 16th, 2026

PROGRAM OVERVIEW

This module based ECHO program will aim to empower pediatric healthcare providers through clinical tools and knowledge to evaluate and care for pediatric patients with additional developmental needs. By connecting participants with an interdisciplinary team of subject matter experts, we will foster community care networks to provide for children of all ages. In addition, by utilizing a case based learning model we will encourage collaboration and reduce isolation amongst those caring for children.
